

Reliable networking, managed by **experts**.

NETWORK AS A SERVICE FROM DATA NETWORKS

Focus on your business

We will handle your network

As your organization grows, so does your data, number of users, applications, and workloads. Keeping pace with the challenges and risks of an ever-expanding network can be costly, complicated, and time-consuming.

Our Network as a Service (NaaS) offering delivers a fully managed, secure, and scalable networking solution. There are no upfront equipment costs or expensive management tools. You'll get a high-performing, reliable, and flexible network without worrying about the cost and complexity of maintaining network infrastructure.

Seamless connectivity and optimized performance with predictable pricing

With Network as a Service you get a reliable, customizable, and affordable networking solution for a fixed monthly rate. Our highly certified engineers will design, build, and manage a network that meets the unique needs of your business. It's an all-in-one solution that supports you with the following:

- **Scalability:** You can expand your business's footprint without incurring the typical capital expenses associated with a new or more extensive network.

\$300,000

THE AVERAGE COST OF NETWORK
DOWNTIME FOR BUSINESSES PER HOUR.

1- Gartner

- **Flexibility:** Our solution offers flexibility when adding services, such as asset tracking or location services, to meet your needs.
- **Security:** Our robust security measures help protect your data and network from cyber-attacks.
- **Expertise:** Data Networks team of experts come equipped with specialized knowledge and skills in networking, including one of Juniper's very first Ingenious Champions™, to ensure the optimization of your network for performance and reliability.

The best possible Wi-Fi experience

Get a superior user experience with high-speed and extensive Wi-Fi coverage, customizable applications, round-the-clock network monitoring, and minimal interference – protected by rigorous security measures. .

Intelligent, reliable LAN for less

Get the most intelligent and high-performing campus fabrics with easy-to-use tools that operate at scale with reduced risk—implemented and managed by our experienced network engineers.

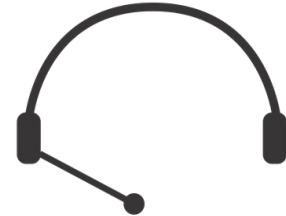

AI powered network technology

Our NaaS solution leverages AI-powered technology from Juniper Networks, driven by Mist AI. Mist AI driven switches and access points are the industry's first AI-powered network, providing agile, dependable, and scalable networks with AI-driven automation and analytics that enhance performance.

NaaS for a flat monthly fee

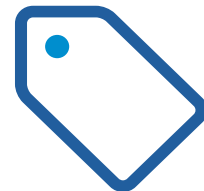

Available for a flat monthly fee that keeps you safe from hidden charges or unpredictable costs, our NaaS solution is available as an add-on service for Managed IT Services partners or as a standalone offering. NaaS policy/plan development is available as a separately priced Professional Service for added convenience.
