TEAMS

Microsoft Solutions from **Data Networks**.

Connect and collaborate on any device, anywhere, at any time.

Today's workforce is more mobile, social, and global. And the devices and digital tools people use to complete their work reflect this change. However, people also have different backgrounds in technology and different expectations about their communication and collaboration activities, which adds to the diversity of devices, tools, and management complexity.

The Microsoft Teams platform delivers tremendous value by bringing new workstyles and user touchpoints together into a cohesive collaboration platform. Data Networks, by combining our knowledge of business processes with the skills to help implement the necessary technology and cultural shifts, can deliver modern communication and collaboration offerings based on Teams.

Our Teams Microsoft Solutions services include capabilities for:

- Teams Strategy and Readiness
- Deployment, Security, & Governance
- Education & User Adoption
- Voice Calling & Virtual Meetings

Teams Deployment, Security, & Governance

Build a secure and compliant Teams solution.

Our team understands your organization's unique requirements along with industry standards and best practices. We can build and deploy your Teams solution in a manner that is consistent with organizational needs for security, data retention, compliance, and more. Our Teams Deployment, Security, & Governance services deliver custom-built Teams solutions that work for you and your organizational requirements.

Strategy & Roadmap Assessment for Teams

Planning and designing a Teams solution lays the groundwork for a smooth rollout. Our team will perform a detailed analysis of your current environment, including user personas, device, and calling + meeting workloads. This assessment creates a customized, prioritized, and actionable roadmap to move your users to Teams for all workloads.

Teams Deployment

There are several things to consider when building a deployment plan for Teams, from ensuring your network is prepared to ensuring that security and compliance of your data is considered. Whether you want to harden your existing Teams controls within Office 365, or you're just getting started with Teams, our Microsoft Engineers can design and deploy your Teams platform according to your unique use cases, goals, and compliance requirements.

Network Configuration & Management

Post deployment is important to configure your Teams platform and determine the management principles that best suit your users' needs. Our team can secure and govern your Teams environment as well as surrounding workloads such as Exchange and SharePoint. We can show you the ropes to managing chat and collaboration, network planning and configuration, and deploying and managing endpoints as a Teams administrator.

Security & Compliance Evaluation & Configuration

Teams is built on Office 365 hyper-scale, enterprise-grade cloud that delivers advanced security and compliance capabilities. Governance is essential to help keep your Teams deployment secure and compliant. It also helps to ensure the best return on investment in Teams and provides the structure for your organization to expand and grow in a safe and controlled manner. Our Microsoft Engineers can bolster your Teams platform by evaluating your configuration against the security and compliance needs of your organization and making the necessary changes to meet those needs.

Education & User Adoption

Increase adoption across the entire organization.

Deploying Teams is just the beginning— changing existing work habits requires both motivation and effort. In order to realize the desired outcomes and ROI on your Teams investment, it's critical to ensure that users adopt, embrace, and use these new services as part of their natural rhythm of work. Our Education & User Adoption services for Teams brings the value of this service to life by educating and motivating users to take full advantage of their new productivity and collaboration tools that lead to new ways of working.

Adoption & Change Management Services

We leverage proven adoption and change management methodologies to drive increased adoption to maximize the value of your Teams investment. We focus on employee-centric outcomes to deliver more than just a set of products to your users. Our team delivers a different, more efficient way of working. The Adoption & Change Management services offer a myriad of other benefits as well, including:

- Improved likelihood of a successful deployment by reinforcing the use of Teams and ensuring it meets not just the needs of the organization, but also the people who make it run.
- Increased usage of Teams by helping employees become more receptive to change.
- Established a mindset that change is part of your organization's culture that supports your unique challenges and drives desired outcomes and goals.

Voice Calling & Virtual Meetings

Work efficiently and stay connected, anywhere, on any device.

Teams delivers immersive experiences that can help your users work more efficiently across the organization and stay connected wherever they are, on any device. With integrated voice calling and virtual meeting solutions built on Teams, your organizations can expect numerous benefits of this seamless collaboration platform. This includes less ineffective communication and less communication apps going undetected by your IT department.

Voice Calling

Deepen user engagements and simplify communication and collaboration by adding PSTN calling capabilities in Office 365 and Teams. Phone System, when paired with Calling Plan and/or Direct Routing, provides a rich, cloud-based calling experience through Teams for Office 365 users.

Virtual Meetings

Teams meetings delivers a rich, high-definition audio and video experience that enables users to interact and collaborate easily, regardless of the device or network. Whether it's one-on-one video calls on mobile and desktop devices, conference meetings held across boardrooms all over the world, or global live events delivered to thousands of people, Teams meetings provides a seamless, scalable, and secure experience for users.
