Disasters happen. **Downtime doesn't have to.**

MANAGED BCDR FROM DATA NETWORKS

Your business is at risk every day.

Gone are the days of unreliable, outdated backups that take too long to restore and carry a high risk of data loss from corruption. These simple daily backups are no longer enough to ensure your business can keep running in the event of ransomware attacks, natural disasters, equipment failure, and human error.

BCDR for Your Always-On Business

Disasters happen—but downtime doesn't have to with Managed Business Continuity and Disaster Recovery (BCDR) from Data Networks. If malware or other disasters *do* hit, our solution ensures you can quickly recover your mission-critical data and resume business operations.

Your success journey is unique. So is our approach.

When you choose Managed BCDR from Data Networks, you gain a responsive partner and multi-solution expert dedicated to helping you succeed through IT. Our approach pairs verified on-premise and cloud backup with a secure, resilient business continuity solution that minimizes costly downtime. And because it's fully managed, you never have to give it a second thought.

An All-in-One Safety Net for Your Data

Our Managed BCDR can mean the difference between coming out on top or taking a major blow to your business and reputation. Like an all-in-one safety net for your data, our solution supports you with:

- **Secure Cross-Platform Data Protection**
  From local servers to end-user computers, we protect physical, virtual, and cloud infrastructure running on Windows, Mac, or Linux— offering the flexibility to restore no matter where your business data lives.

- **Infinite Cloud Retention**
  With backups scheduled as often as every five minutes, your backup is tested, scanned for ransomware, stored locally, and replicated to globally distributed data centers. And with our infinite cloud retention capabilities, we'll store your data for as long as your business requires.

- **Ransomware Vigilance and Detection**
  Our solution protects against ransomware threats before they impact your business. We monitor and target specific patterns of ransomware to detect threats and get you back to business without paying ransom should you face such circumstances.

- **Operational Resilience**
  We combine business continuity with disaster recovery capabilities to minimize downtime—providing on-premise and secure cloud business continuity options to keep your business running in an emergency.

- **Reduced Storage Costs**
  We leverage data deduplication technologies to help reduce data redundancy—keeping your storage costs as low as possible.

Enjoy BCDR for a Flat Monthly Fee

Available for a flat monthly fee that keeps you safe from hidden charges or unpredictable costs, our Managed BCDR solution is available as an add-on service for Managed IT Services partners. For added convenience, BCDR policy/plan development is available as a separately priced Professional Service.
